

Abilene: SPIN + Direct path controls
Development histories, no smoothing; 6/6 trajectories complete

— SPIN + Direct / seed 41001 [complete: 160/160] - - Context-only / seed 41002 [complete: 160/160]
- - SPIN + Direct / seed 41002 [complete: 160/160] — Direct-only / seed 41001 [complete: 160/160]
— Context-only / seed 41001 [complete: 160/160] - - Direct-only / seed 41002 [complete: 160/160]

Incomplete lines stop at the last saved epoch. Two seeds are two trajectories; 120-to-160 continuation is not a new repeat.
Same saved points in both panels; different vertical scales. Development-only optimization diagnostic, not a convergence or significance claim.
